

RELIANCE, INC.
GREENHOUSE GAS (GHG) REPORTING DATA

The following table sets forth information regarding our greenhouse gas emissions for each of the last three years ended December 31:

Emissions Indicators	2025	2024	2023
Scope 1 emissions MT CO ₂ e*	195,000	186,000	186,000
Scope 2 emissions MT CO ₂ e**	102,000	117,000	116,000
Total MT CO ₂ e	297,000	303,000	302,000
Greenhouse Gas Intensity by Revenue***	20.8	21.9	20.4

* Scope 1 emissions (in metric tons of carbon dioxide equivalent) represent direct greenhouse gas (GHG) emissions resulting from fuel consumed to operate our fleet of trucks and facilities. As a distributor, approximately 73% of our Scope 1 emissions arise from fuel consumption for product delivery. Scope 1 (GHG) emissions are derived from our fleet of approximately 1,800 trucks, approximately 310 locations and 33.3 million square feet of facility space.

** Scope 2 emissions (in metric tons of carbon dioxide equivalent) represent indirect GHG emissions from purchased electricity. Emissions at each facility vary based on amount of energy purchased and emissions efficiency of grid energy source.

*** The greenhouse gas intensity by revenue metric is the sum of our Scope 1 and location-based Scope 2 emissions in metric tons of carbon dioxide equivalent divided by our revenues (in millions).

The following table sets forth information regarding our Greenhouse Gas Intensity by Total Tons Transacted for each of the last three years ended December 31:

Emissions Indicators	2025	2024	2023
Greenhouse Gas Intensity by Total Tons Transacted*	21.5	22.7	23.4

* The greenhouse gas intensity by total tons transacted metric is the sum of our Scope 1 and location-based Scope 2 emissions in metric tons of carbon dioxide equivalent divided by the aggregate of our tons sold and tons toll processed (in thousands of tons).
